## PROFESSION SUMMARY

---

Data Scientist and Full Stack Developer with 3+ years of experience across machine learning, computer vision, MLOps, and end-to-end software development. Skilled in building and deploying production grade applications using Python, PyTorch, React, and modern CI/CD pipelines, with hands on experience leveraging AI assisted development tools to accelerate delivery. Currently leading business development and internal systems architecture at Cluster Technologies, with a track record of shipping real world projects from data pipeline to deployed product.

## TECHNICAL SKILLS

---

**Languages:** Python, R, C++, SQL, TypeScript, JavaScript

**Data Science and ML:** Exploratory Data Analysis, Feature Engineering, Statistical Analysis, Convolutional Neural Networks, Object Detection, Computer Vision

**ML Frameworks:** PyTorch, Scikit Learn, ResNet50, YOLOv8

**MLOps and DevOps:** Docker, Dagger, DVC, GitHub Actions, CI/CD Pipelines, Git

**Web Development:** React, Vite, Tailwind CSS, Node.js, Express.js, FastAPI

**Databases:** PostgreSQL, Supabase

**Deployment:** Vercel, Netlify

**AI Augmented Development:** AI Assisted Development Workflows, Prompt Engineering, Agentic Coding, LLM Integration

## PROFESSIONAL EXPERIENCE

---

**Lead - Corporate Relations and Business Development Division**

**Cluster Technologies, Dhaka, Bangladesh**

*June 2026, Present*

Built the corporate relations and business development division from the ground up as sole lead, replacing a single spreadsheet workflow with a structured system

Developed an internal CRM using HTML and CSS within the first week to migrate data out of a complex multi sheet spreadsheet, later rebuilt into a full internal ERP using React, Vite, Node.js,

and Express, deployed on the company internal server.

Established HR processes from scratch in the absence of a dedicated HR function, including job postings, candidate assessment, and hiring workflow.

Managed client relationships end to end, including ongoing account communication and outreach for new client acquisition.

Produced data driven reports using Jupyter Notebook to support decisions including vendor selection and organizational structure design

### **Data Analyst and Researcher**

**Mind, Matter, Space Architects, Dhaka, Bangladesh**

*February 2026, May 2026*

Bridged quantitative analysis with architectural design, translating spatial and environmental data into strategic design decisions.

Leveraged user data, environmental metrics, and spatial analytics to inform building performance and enhance user experience.

Produced analytical dashboards and reports for stakeholders and design teams.

Designed and built the company website, [www.mmspacearchitects.com](http://www.mmspacearchitects.com), featuring project showcases, services, a shop, blog, and team profiles

### **Courier Co coordinator, Part Time**

**Just Eat, Denmark**

*August 2023, October 2025*

Promoted to Road Captain within four months based on performance, then to Courier Co coordinator after one year.

Managed the day-to-day activity of a team of couriers, overseeing scheduling, onboarding, and performance.

Resolved on the go operational problems in real time, from routing and delivery delays to individual courier issues.

Served as the primary liaison between couriers and management, communicating updates and escalating issues as needed.

## **PROJECTS**

---

### **BigSip**

Built a local first tool that lets an AI assistant query massive CSV and Excel files through SQL instead of reading raw file contents, avoiding both file size limits and context window limits, keeping all data on the user's local machine. Packaged into .exe for easy non-tech users using

Pyinstaller.

### [Mind, Matter, Space Architecture Portfolio Web App](#)

Built a full stack architecture and interior design portfolio featuring project showcases, a shop, blog, and admin dashboard with role-based access control, using React, TypeScript, Vite, Tailwind CSS, and Framer Motion for the frontend, and Express.js with Supabase for the backend, deployed on Vercel.

### [Interior Design Style Matcher API](#)

Built a computer vision API using FastAPI and PyTorch that predicts interior design style and detects furniture items, fine tuning ResNet50 to 85 percent accuracy and YOLOv8 to a mean average precision of 0.72, with a fully automated training and deployment pipeline using Dagger and GitHub Actions

### [MLOps CI/CD Pipeline with Dagger](#)

Built a portable, containerized CI/CD pipeline for machine learning workflows using Dagger.io, automating model training, validation, and testing through version-controlled pipeline definitions triggered on code changes.

### **Melanoma Detection using Convolutional Neural Networks**

Developed a CNN based classifier to identify malignant skin lesions from dermoscopic images, achieving clinically relevant performance through data preprocessing and augmentation.

## **EDUCATION**

|                                                                                                  |                                |
|--------------------------------------------------------------------------------------------------|--------------------------------|
| <b>BSc in Data Science</b>   IT University of Copenhagen, Denmark                                | 2022 – 2025                    |
| <b>BSc in Computer Science &amp; Engineering</b>   Ahsanullah University of Science & Technology | 2017 – 2021                    |
| <b>BSc in Statistic</b>   Khulna University, Bangladesh                                          | 2017(January – 2017(September) |
| <b>Higher Secondary Certificate (GPA 5.00)</b>   Saint Joseph Higher Secondary School            | 2016                           |
| <b>Secondary School Certificate (GPA 5.00)</b>   Meherpur Government High School                 | 2014                           |

## **RESEARCH AND PUBLICATIONS**

---

### [Bird Extinction Project](#)

A statistical investigation into the factors driving extinction risk among bird species, using breeding pair data collected from sixteen islands around Britain over several decades. Built and iterated on linear regression models in R to examine how nesting pair count, species size, and migratory status relate to time to extinction, testing multiple variable transformations to improve model fit and interpretability.

## **Effectiveness of VR Exercise at Helping Adults Become Healthier**

A mixed methods study examining whether virtual reality-based exercise can meaningfully improve physical health outcomes compared to traditional workouts. Combined structured interviews with data analysis to evaluate real world effectiveness and user experience, concluding that while VR exercise currently falls short of replacing traditional exercise at scale, it holds long term potential as the technology matures, with findings relevant to both health-conscious users and VR product development.

## **Gaming in the Cloud, Environmental Challenges and Opportunities**

An analysis of the environmental footprint of cloud gaming, focusing on its dependency on data centers, server farms, and networking infrastructure as the industry scales. Evaluated the trade off between improved accessibility and rising energy demand, and proposed mitigation strategies including data center efficiency improvements, renewable energy adoption, and approaches to counter rebound effects, aiming to contribute to a broader conversation on sustainable practices in gaming.
