## OBJECTIVE

---

Data Scientist with a background in Computer Science & Engineering and studied in Data Science at IT University of Copenhagen. Experienced in machine learning, statistical analysis, MLOps, and computer vision — with a track record of building and deploying real-world projects end-to-end. Leverages AI-assisted tooling to rapidly prototype and ship production-grade applications. Seeking a role where analytical thinking, applied ML, and a hands-on approach to problem-solving can drive meaningful impact.

## WORK EXPERIENCE

---

**Data Analyst & Researcher** | [Mind, Matter, Space Architects](#)

Jan 2026 – Present

Dhaka, Bangladesh

- Bridge quantitative analysis with architectural design, translating spatial and environmental data into strategic design decisions.
- Leverage user data, environmental metrics, and spatial analytics to inform building performance and enhance human experience.
- Produce insightful dashboards and analytical reports for stakeholders and design teams.

## PROJECTS

---

**mmspacearchitects.com – Architecture Portfolio Web App**

Jan 2026 – Present

[www.mmspacearchitects.com](http://www.mmspacearchitects.com)

- Built a full-stack architecture and interior design portfolio for Mind, Matter, Space Architects, Dhaka — featuring project showcases, services, a shop, blog, and team profiles.
- Designed and developed the complete frontend using React 18, TypeScript, Vite, Tailwind CSS, shadcn/ui, and Framer Motion for animations; TanStack Query for data fetching.
- Built the backend with Express.js / Node.js and integrated Supabase (PostgreSQL) for persistent storage, with bcryptjs and express-session for secure authentication.
- Implemented a full admin dashboard with role-based access control for content management of projects, products, and services.
- Deployed on Vercel with a clean monorepo architecture (client / server / shared modules); also compatible with Netlify — zero config changes required.
- Developed end-to-end using AI-assisted tooling: Claude, DeepSeek, and Cline — demonstrating proficiency in modern AI-augmented development workflows.

**Interior Design Style Matcher API**

Ongoing

[GitHub Repository](#)

- Computer vision API that analyses room photos to predict interior design style (modern, rustic, minimalist, etc.) and detect furniture items, serving personalized product recommendations.
- Built with FastAPI and PyTorch; fine-tuned ResNet50 for style classification (85% accuracy on held-out test set) and YOLOv8 for object detection (mAP 0.72).
- Automated full ML pipeline — data preprocessing, model training, selection, and Docker image export — using Dagger and GitHub Actions.
- Leveraged Open Images (furniture detection) and Indoor Scenes/Places365 (style) datasets; applied data augmentation to improve generalization.
- Containerized with Docker; deployed via GitHub Actions artifacts for seamless cloud deployment.

**MLOps CI/CD Pipeline with Dagger**

Feb 2025 – May 2025

GitHub Repository

- Built a portable, containerized CI/CD pipeline for ML workflows using Dagger.io — ensuring consistent behavior across local development and GitHub Actions.
- Automated model training, validation, and testing stages through version-controlled pipeline definitions; triggered on code pushes and pull requests.

**Melanoma Detection using CNNs**

Sep 2023 – Jan 2025

- Developed a CNN-based classifier to identify malignant skin lesions from dermoscopic images using computer vision techniques.
- Preprocessed and augmented a dataset of hundreds of images to improve model accuracy and robustness; achieved clinically relevant performance metrics.

**EDUCATION**
